Royal Oak, MI 48067

U.S. Permanent Resident (Green Card) — no visa sponsorship required

LEADERSHIP PROFILE

Engineering and AI platform leader who solves enterprise business problems through **People, Process, and Technology**. Currently lead an organization with principal and senior engineers, senior business analysts, a product owner, and a team lead—owning the long-term strategy, roadmap, and delivery of UWM's enterprise AI automation platform. Built that platform from the ground up into the company's largest deployment of Google LLMs, generating multimillion-dollar annual savings and returning over a million work-hours to the business. Now executing a second zero-to-one build in parallel—an agentic, spec-driven software development platform piloting across UWM's ~2,000-person IT organization.

SIGNATURE IMPACT

- **\$4.1M+** in annualized savings through strategic platform optimization initiatives (\$346K / month).
- **1M+ work-hours** returned annually ~10 hrs/week across ~2,000 underwriters, roughly 500 full-time work-years of capacity.
- **20 person org** led directly, including senior/principal engineers and a team lead—scope typical of a Director / AVP.
- **Two enterprise platforms** conceived and built from zero—an AI business-automation platform, now the largest enterprise use case of Google LLMs at UWM, and an agentic software development platform launched in 2026.

CORE COMPETENCIES

Leadership & Strategy: People Management • Long-Term Strategy & Road mapping • Org Building & Mentorship • Product Ownership • Agile Leadership (Scrum, Kanban) • Operational Efficiency • Stakeholder Alignment • Complex Problem Solving

Technical: Artificial Intelligence • Machine Learning • Large Language Models (Google Gemini, Anthropic Claude, self-hosted open-weight models via vLLM, Embeddings) • Agentic AI & Autonomous Code Generation • Spec-Driven Development • Application Architecture & System Design • Google Cloud Platform (Cloud Run, GKE, BigQuery) • Python • Kubernetes • Apache Kafka • AWS • Terraform • CI/CD • Language-Agnostic Engineering

PROFESSIONAL EXPERIENCE

United Wholesale Mortgage (UWM)

Pontiac, MI

Senior Team Leader — AI Platforms & Product Development

Jul 2024 – Present

Lead an over 20-person organization—principal and senior software engineers, senior business analysts, a product owner, and a team lead—owning strategy, roadmap, and delivery of two enterprise AI platforms built from zero: a multi-tenant business automation platform whose largest client is UWM's flagship underwriting product, BOLT, and a new agentic software development platform.

- Conceived and built UWM's document-interrogation automation platform from the ground up—now the largest enterprise deployment of Google LLMs at the company—converting manual, document-heavy underwriting reviews into real-time, AI-driven decision support.
- Identified the opportunity as an individual contributor and authored the founding business proposal to VP/AVP stakeholders, securing executive sponsorship to stand up the team from zero—then hired, structured, and matured the org built from there.
- Delivered ~\$4.1M in annualized savings (\$346K/month) through strategically targeted platform optimizations, with additional millions realized through loan-quality and underwriter-efficiency gains.
- Returned over a million underwriter hours per year to the business—10 hours/week across ~2,000 underwriters—the equivalent of roughly 500 full-time work-years of reclaimed capacity.

- Expanded the platform from a single underwriting use case into a multi-tenant service supporting client products enterprise-wide, handling any document-based review requiring complex question answering.
- Founded a second platform from zero in 2026—an agentic, spec-driven development platform that ingests specification documents and autonomously produces production-ready code—extending the build-from-zero playbook from business automation into software engineering.
- Delivered ~500 pull requests within the first month of pilot, targeting step-change developer throughput across UWM's ~2,000 IT professionals.
- Architected the platform model-agnostic—interchangeable Google Gemini, Anthropic Claude, and self-hosted open-weight models served via vLLM—eliminating vendor lock-in and routing workloads on cost and performance.
- Architected ML solutions using Google Gemini, custom-trained models, and embeddings to automate Title Review, Assets, Purchase Agreements, Pay Stubs, Credit Reports, and Appraisals.
- Serve concurrently as Product Owner (vision, prioritization, roadmap) and Scrum Master (Agile delivery, incremental releases).
- Own people leadership across both platforms—hiring, career development, and performance management for principal/senior engineers, business analysts, and a team lead—standing up a second team for the new platform while running the existing org and platform.

Software Developer III

Mar 2024 – Jul 2024

Member of the BOLT Architects team; led multiple product- and organization-critical initiatives.

- Drove currency-management efforts that cut technical debt and eliminated security vulnerabilities across multiple BOLT services.
- Led a cohort of summer team members through a full-stack microservices project (React + .NET 8), achieving 75% retention.
- Acted as technical liaison to vendor partners (Qarik/Egen), owning environment setup and integration; mentored developers across frameworks and tooling.

Data Platform Engineer II

Mar 2023 – Mar 2024

- Administered an on-premises Confluent Kafka platform at 99.99% availability, processing billions of messages daily across the organization's intranet.
- Supported 1,900+ technology professionals integrating with Kafka, Redis, and Qlik; ran the Redis distributed cache platform at ~4,000 operations/second.
- Pioneered open-source Kafka adoption to cut vendor dependency and migrated Kafka connectors into Kubernetes via custom Python tooling.

NASDAQ

Philadelphia, PA

Software Developer

Sep 2019 – Mar 2023

- Sole maintainer of a full-stack trading application ecosystem at 99.999% availability within an AWS Kubernetes cluster.
- Built Java/Spring gateways bridging legacy trading frameworks to NASDAQ's consolidated Fusion platform; introduced Scala/Java code generators driven by a domain DDL file system.
- Modernized the ecosystem end-to-end, migrating 1990s-era trading software to current Scala (2.8, 3.0) and Java (11, 16) with zero uptime loss during the transition.
- Delivered back-end services integrating multiple international NASDAQ exchanges through cross-border collaboration.

EDUCATION

B.S. in Computer Science, Drexel University — College of Computing & Informatics 2021

Concentrations in Artificial Intelligence and Computer & Network Security • Minor in Data Science • Honors College (Pennoni) • Cum Laude, GPA 3.65/4.0

LICENSES & CERTIFICATIONS

- **Professional Scrum Master I (PSM I)** — Scrum.org, 2025
- **Leadership Essentials, Professional Certification** — Cornell University, 2023
