PRAKHAR SAXENA

AI Platform, Engineering & Enablement Leader • Strategy, People & Operational Scale

prakhar-saxena.com | prakharsaxena.social@gmail.com | (267) 234-1604 | linkedin.com/in/prakhar-saxena | Royal Oak, MI 48067

U.S. Permanent Resident (Green Card) — no visa sponsorship required

LEADERSHIP PROFILE

Engineering and AI platform leader who solves enterprise business problems through **People, Process, and Technology**. A leader of leaders at UWM, heading a ~30-person organization and three AI programs built from zero: a document-interrogation platform that became UWM's largest Google LLM deployment, saving millions a year and returning 1M+ work-hours; an agentic development platform that cut cycle time ~30% across IT; and company-wide AI Enablement for all ~9,000 team members.

SIGNATURE IMPACT

- **$4.1M+** in annualized savings through strategic platform optimization initiatives ($346K / month).
- **1M+ work-hours** returned yearly across ~2,000 underwriters—roughly 500 work-years of capacity.
- **~870K developer hours** of capacity a year—roughly 420 developers' worth—from a ~30% cut in Jira cycle time across ~1,400 developers, with nearly all new code now AI-written.
- **~30-person organization** led as a leader of leaders—team leaders run the platform teams; senior developers and architects lead AI Enablement—scope typical of a Director / AVP.
- **Three enterprise AI programs** built from zero: document interrogation (UWM's largest Google LLM deployment), agentic development, and company-wide AI Enablement for ~9,000 people.

CORE COMPETENCIES

Leadership & Strategy: People Management (Leader of Leaders) • Enterprise AI Enablement & Adoption • AI Governance & Standards • AI Cost Strategy (OpEx to CapEx) • Strategy & Roadmapping • Org Building & Mentorship • Executive Alignment • Product Ownership • Agile Leadership (Scrum, Kanban)

Technical: Machine Learning • Large Language Models (Google Gemini, Gemma 4, Anthropic Claude, open-weight models via vLLM, Embeddings) • Agentic AI & Spec-Driven Development • Model, Agent & Harness Evaluation • Agent Guardrails & Observability • AI Productivity Tools (Claude Code, GitHub Copilot, Cursor, Microsoft 365 Copilot) • Mutation Testing & CI Quality Gates • System Architecture • Google Cloud Platform (Cloud Run, GKE, BigQuery) • Python • Kubernetes • Apache Kafka • AWS • Terraform • CI/CD

PROFESSIONAL EXPERIENCE

United Wholesale Mortgage (UWM) *Pontiac, MI*

Senior Team Leader — AI Platforms & Product Development Aug 2026 – Present

Team Leader — AI Platforms & Product Development Jul 2024 – Jul 2026

Lead a ~30-person AI organization—principal and senior engineers, architects, senior business analysts, and a product owner—as a leader of leaders, owning hiring, development, and performance management; step into the PM, Product Owner, and Scrum Master roles whenever a new program starts.

Enterprise AI Enablement · *company-wide* · *Sep 2026 – Present*

- Pitched company-wide AI Enablement to the SVP and his VPs and won the mandate to build it from zero for all ~9,000 team members—structured around four questions (What to use? When and why? How? Is it working?) and three platforms: Evaluation, Agent, and Personal AI.
- Building an Evaluation Platform that scores models, skills, agents, and harnesses on accuracy, cost, latency, adoption, and productivity—from system data, not surveys.
- Defining UWM's agent standards—design, security, guardrails, integrations, observability—with business-built agents allowed only after an independent hard review (~5 days on average).
- Run the Personal AI Platform: Claude Code, GitHub Copilot, and Cursor for ~1,400 developers; Microsoft 365 Copilot for ~7,600 others, now at ~70% adoption and climbing.

- Drive adoption through the existing IT training team—training the trainers; weekly sessions draw ~40 people—plus skill and prompt catalogs with a one-stop shop, organized by role.
- Founding, voting member of UWM's AI Standards Council, setting company-wide AI standards with Legal.

Agentic Development Platform · *IT organization* · *2026 – Present*

- Founded an agentic, spec-driven development platform that turns specifications into production-ready code; scaled it from pilot to near-universal use across IT, with 1,000+ PRs in a single month.
- Cut Jira cycle time ~40% for pilot teams and ~30% across IT; nearly all new code is now AI-written, with developers reviewing and refining rather than hand-writing it.
- Held that code to proven engineering controls, not trust in the model: resilient services and quality gates requiring 100% test coverage and an 80% mutation score.
- Architected it model-agnostic—Google Gemini, Anthropic Claude, and self-hosted open-weight models via vLLM—eliminating vendor lock-in and routing workloads on cost and performance.

Document-Interrogation Platform · *enterprise-wide* · *2024 – Present*

- Identified the opportunity as an individual contributor, wrote the founding business proposal to VP/AVP stakeholders, and secured executive sponsorship to build the team from zero.
- Built the platform into UWM's largest Google LLM deployment—Gemini, custom-trained models, and embeddings turning manual underwriting document reviews into real-time decision support.
- Delivered ~$4.1M in annualized savings ($346K/month) and returned 1M+ underwriter hours a year (~500 work-years), plus millions more in loan-quality and efficiency gains.
- Grew it from one underwriting use case into a multi-tenant service for client products enterprise-wide, handling any document review that requires complex question answering.
- Working hands-on with an architect on a self-hosted Gemma 4 vs. Gemini proof of concept—targeting near-zero marginal inference cost (OpEx to CapEx) and an end to forced model migrations.

Software Developer III Mar 2024 – Jul 2024

- On the BOLT Architects team, cut technical debt and security vulnerabilities across BOLT services and led a summer cohort through a React + .NET 8 microservices project (75% retention).

Data Platform Engineer II Mar 2023 – Mar 2024

- Ran an on-premises Confluent Kafka platform at 99.99% availability (billions of messages daily) and a Redis cache at ~4,000 ops/sec for 1,900+ technology professionals.
- Pioneered open-source Kafka adoption to cut vendor dependency; migrated Kafka connectors into Kubernetes with custom Python tooling.

NASDAQ *Philadelphia, PA*

Software Developer Sep 2019 – Mar 2023

- Sole maintainer of a full-stack trading ecosystem at 99.999% availability on AWS Kubernetes; built Java/Spring gateways to NASDAQ's Fusion platform and DDL-driven Scala/Java code generators.
- Migrated 1990s-era trading software to modern Scala and Java with zero downtime; delivered back-end services integrating multiple international NASDAQ exchanges.
- Concurrently led the open-source port of Quill to Scala 3 with 5–6 developers; the result, ProtoQuill, became Quill's official Scala 3 implementation.

EDUCATION

B.S. in Computer Science, Drexel University — College of Computing & Informatics 2021
Concentrations in Artificial Intelligence and Computer & Network Security • Minor in Data Science • Honors College (Pennoni) • Cum Laude, GPA 3.65/4.0

LICENSES & CERTIFICATIONS

- **Professional Scrum Master I (PSM I)** — Scrum.org, 2025
- **Leadership Essentials, Professional Certification** — Cornell University, 2023
